- (54) Title:** TECHNIQUES FOR UPDATING SECURITY-RELATED PARAMETERS FOR MOBILE STATIONS

- (57) Abstract:** A method is performed on a first server for communicating with a mobile station in order for the mobile station to update a security-related parameter. The method comprises determining that a request expressed in a first protocol has been made by a second server for updating the security-related parameter on the mobile station. In response to the determination, the request is packaged in a message expressed in a second protocol and is communicated to the mobile station. Another method is disclosed that is performed on a mobile station for updating a security-related parameter. The method comprises receiving a message that is expressed in a first protocol from a server and that comprises a request for the mobile station to update the security-related parameter. The request is expressed in a second protocol. In response to the message, at least one operation is performed in order to update the security-related parameter.
